RECORD OF INTERVIEW

The applicants would like to thank Examiner Ronald Baum for his helpful comments and suggestions during the telephone interview with the undersigned and associate attorney Wendell Peete on December 14, 2005. During the telephone interview certain aspects of novelty over the cited art were discussed.

Pursuant to 37 C.F.R. § 1.133(b), the following description is submitted as a complete written statement of the reasons presented at the interview as warranting favorable action. The following statement is intended to comply with the requirements of MPEP § 713.04 and expressly sets forth: (A) a brief description of the nature any exhibit shown or any demonstration conducted; (B) identification of the claims discussed; (C) identification of specific prior art discussed; (D) identification of the principal proposed amendments of a substantive nature discussed; (E) the general thrust of the principal arguments; and (F) a general indication of any other pertinent matters; and (G) the general results or outcome of the interview, if appropriate.

(A) No exhibits were shown or discussed.

(B) The independent claims were discussed, in particular certain aspects relating to flow-based detection of network intrusions.

(C) The *Shipley* (6,119,236) patent was discussed.

(D) No proposed amendments were officially presented or discussed, but the claim amendments presented in this paper are consistent with the discussion.

(E) The general thrust of the discussion was as set forth below in the next paragraphs.

(F) No other matters were discussed.

(G) No agreement was reached during the interview regarding the claims.

The general thrust of the discussion was that the *Shipley* patent did not disclose, teach, or suggest the claimed aspects of a flow-based detection of suspicious network activity such as intrusions. As discussed, and among other aspects, the claimed invention(s) provide for detection of suspicious network activity based on the monitoring

of packets between two hosts on a network that are associated with a single service, and characterizing a group of such packets as a "flow."

The examiner suggested that the claims be amended to more particularly specify what a flow is and how the flows are used to determine the recited "concern index." No agreement on particular claim language was reached, pending submission of a formal amendment.

The amendments herein and comments that follow are intended to be consistent with the remarks made during the interview.

In the event that the foregoing record is not considered complete and accurate, the Examiner is respectfully requested to bring any incompleteness or inaccuracy to the attention of the undersigned.
